DATE	TIME	STAFF GAGE OBSERVATION (FEET)*		DATE	TIME	STAFF GAGE OBSERVATION (FEET)*

^{*} Measure from the reference point (datum) for each observation. It is a good idea to permanently mark a reference elevation on a structure near the staff gage. The vertical distance between the reference elevation and the staff gage should be measured and recorded. If the staff gage is damaged or moved, it can then be reset to and calibrated with the original datum.
